

**What's useful  
about mapping?**

X Pump    • Deaths from cholera

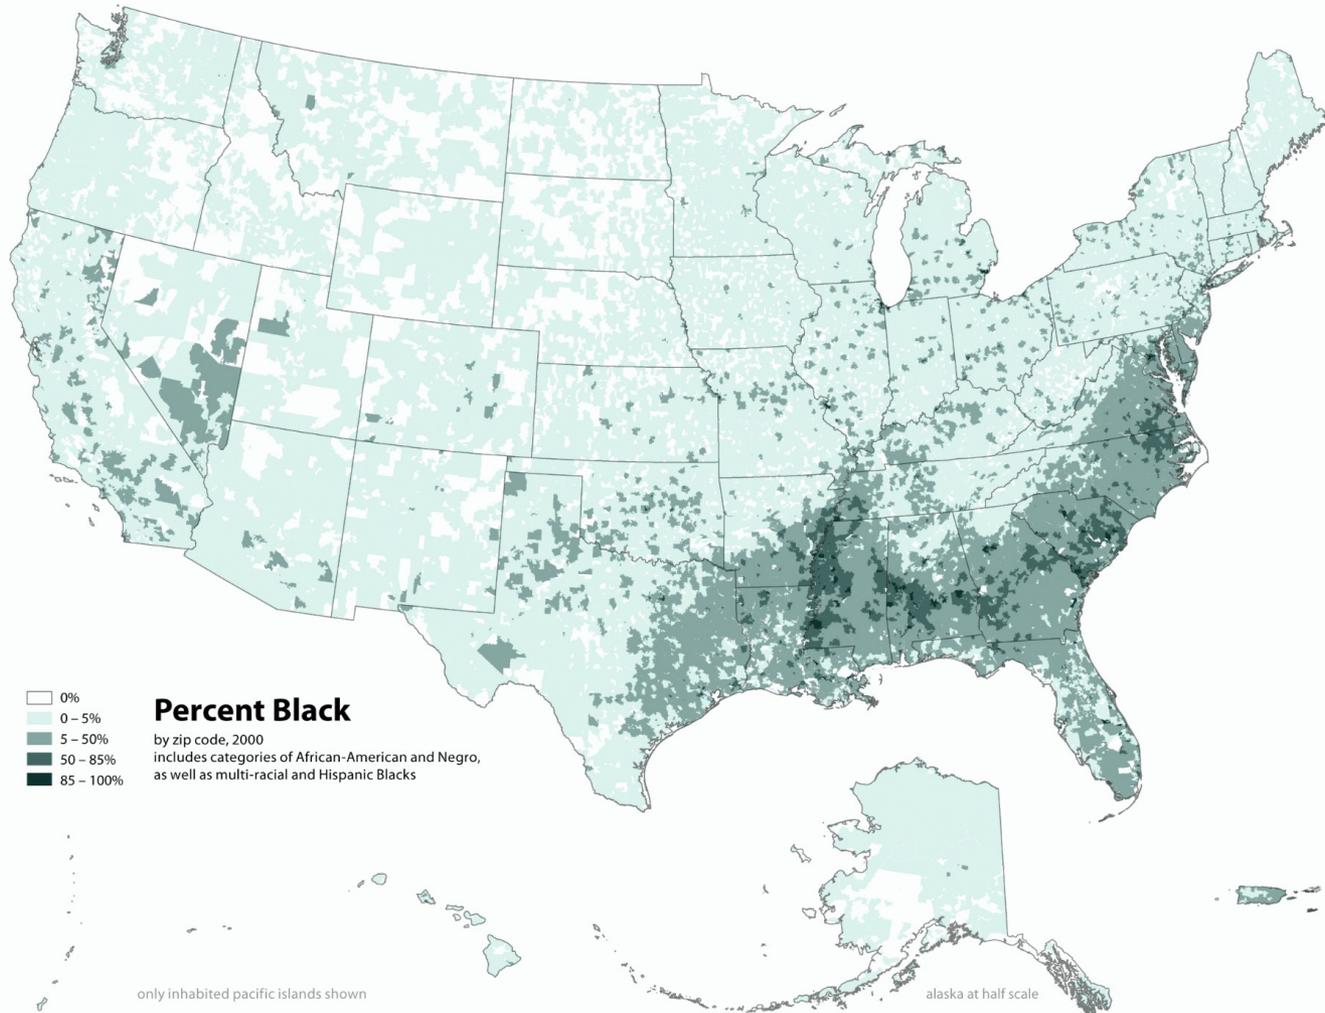

**Intent matters most in  
mapping**

**Your map form depends  
on what you want to show**

# **Common types of maps**

# Choropleth

# Choropleth

## **Good for:**

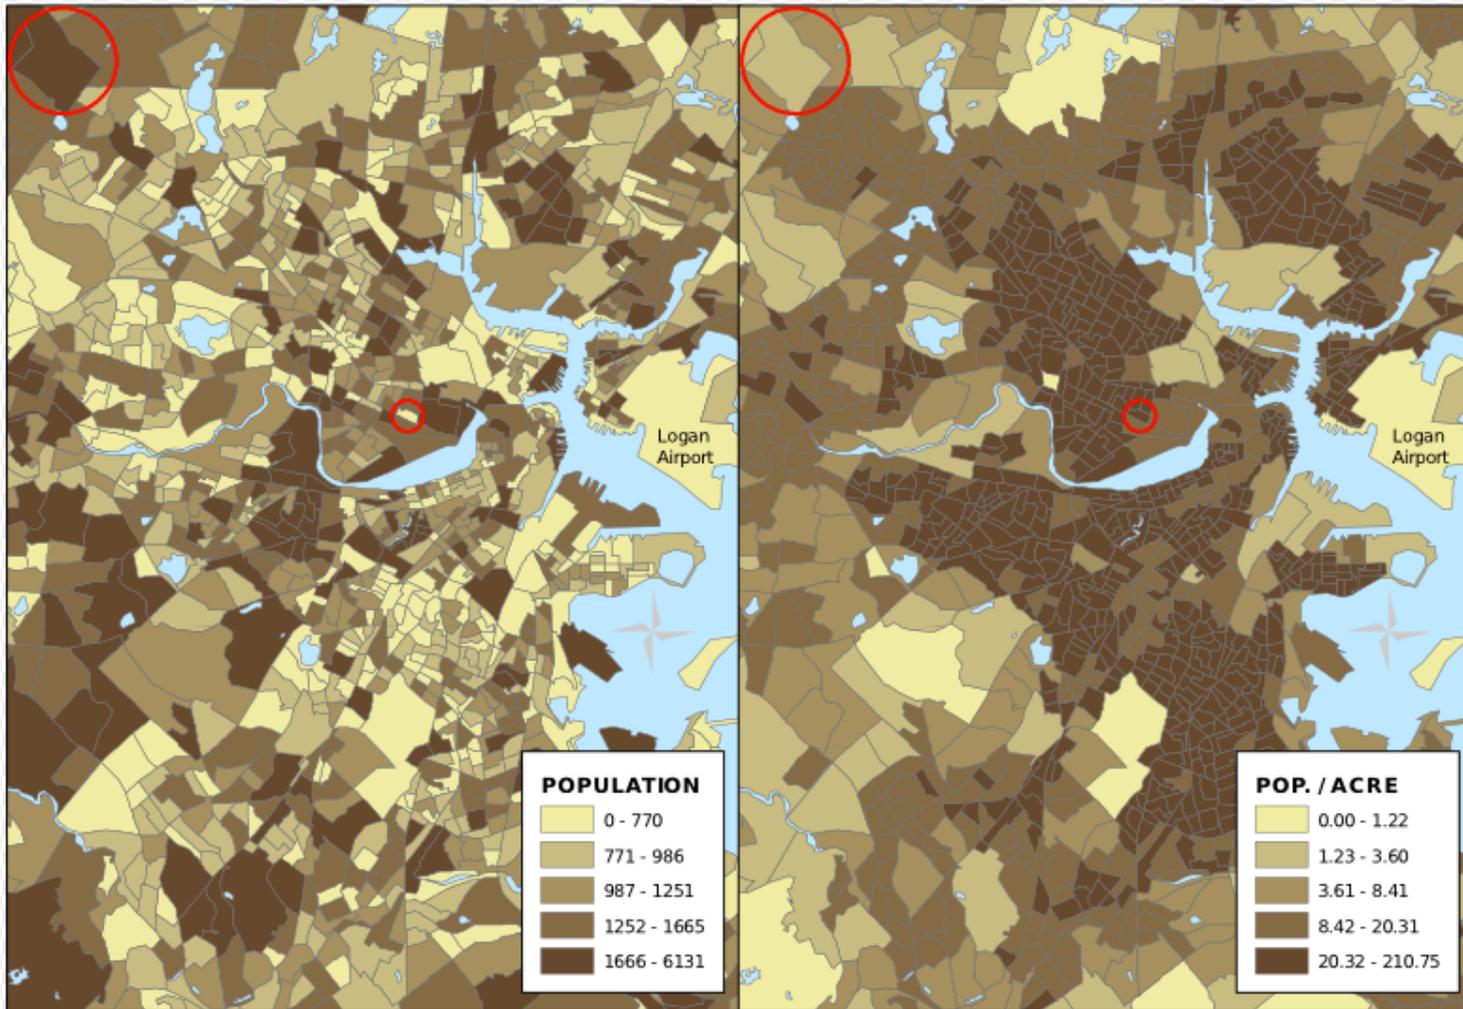

- Showing normalized change or variation
- Highlighting areas

## **Common mistakes:**

- Not so meaningful with small geographies
- Easy to misinterpret
- Forgetting to normalize

Total Population of 2000 Census Block Groups

Population Density of 2000 Census Block Group

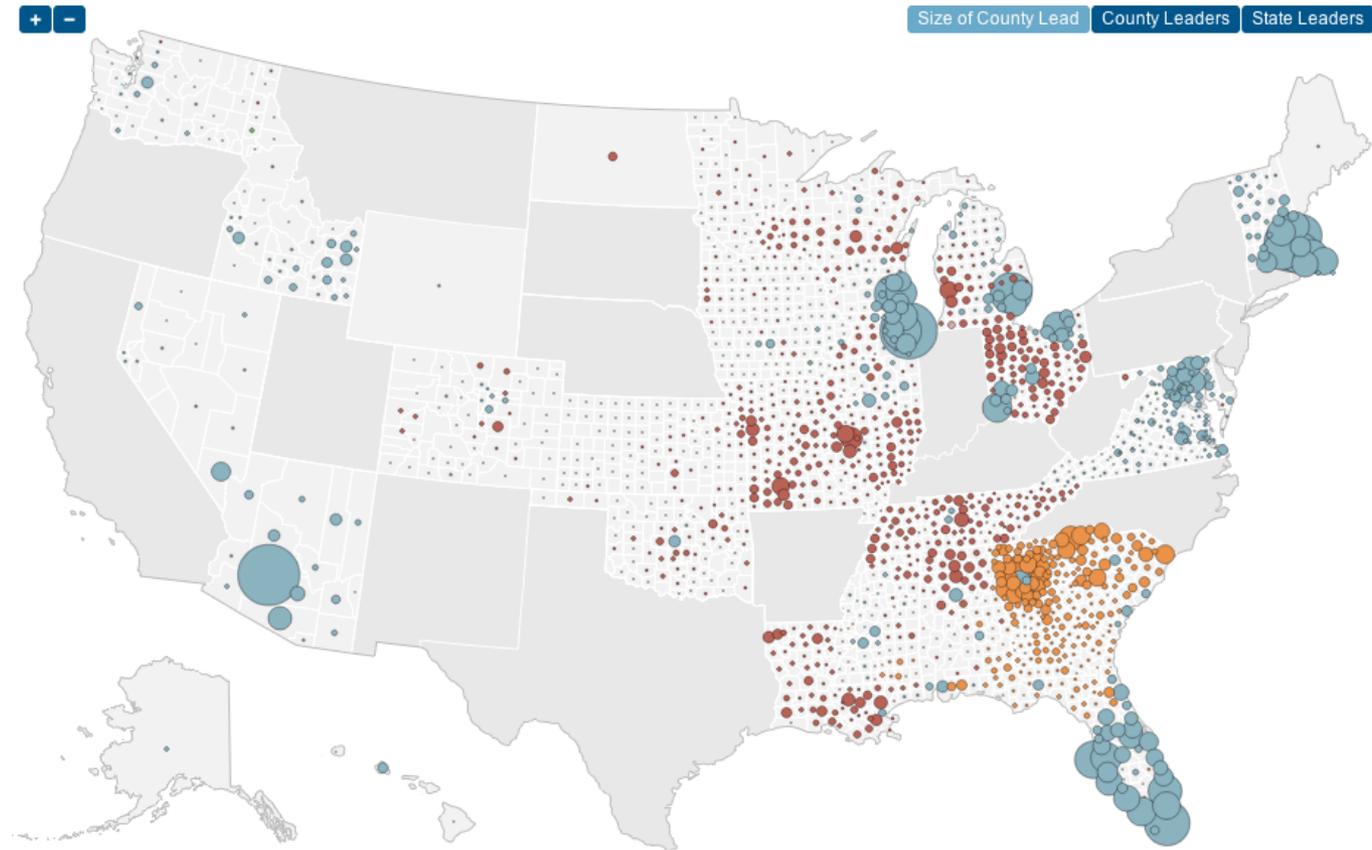

From Wikipedia.

# Proportional circles

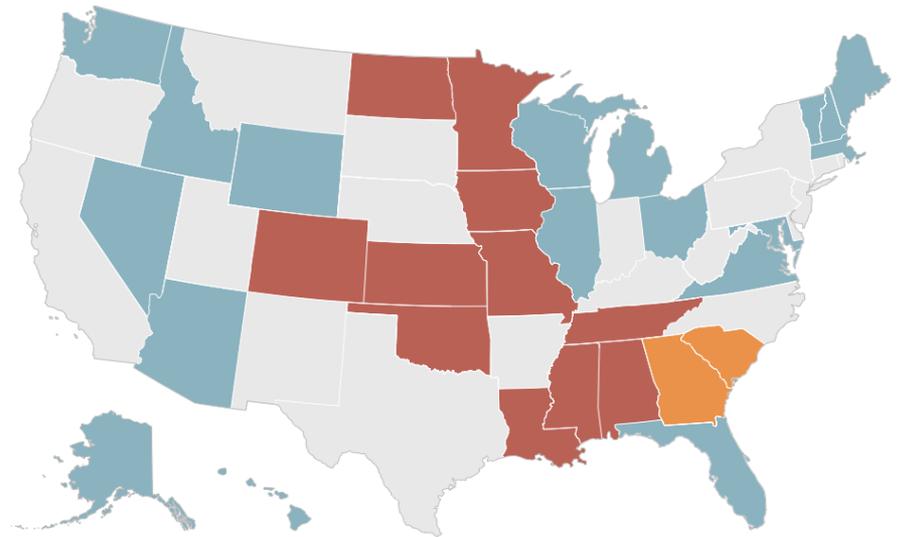

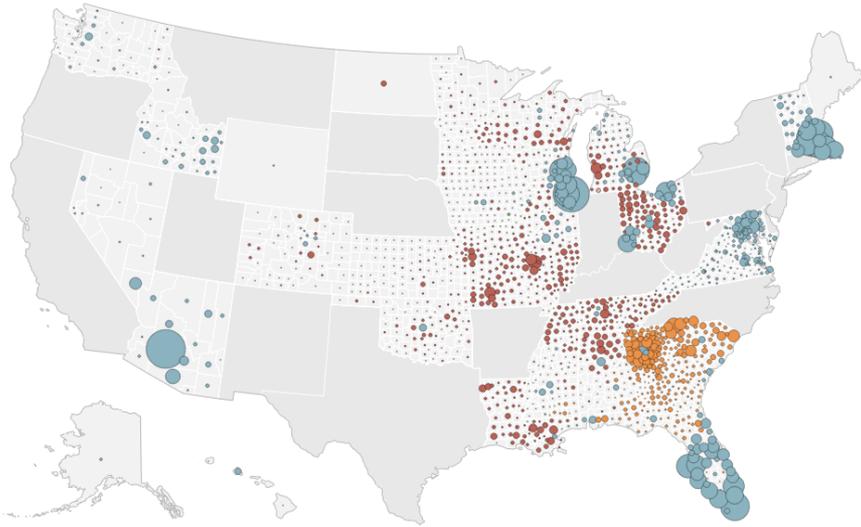

## Rick Santorum's Race

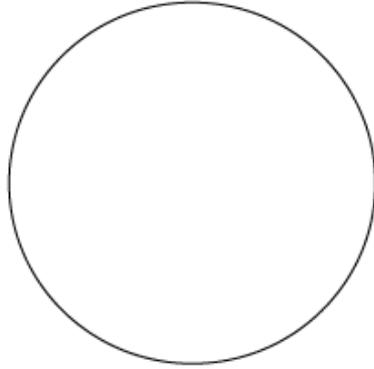

Rick Santorum suspended his campaign Tuesday. In primaries and caucuses, Mr. Santorum carried much of the rural Midwest and South, and had heavy support from evangelical voters and the most conservative voters.

■ Mitt Romney **661 delegates** | ■ Rick Santorum **285** | ■ Newt Gingrich **136** | ■ Ron Paul **51**

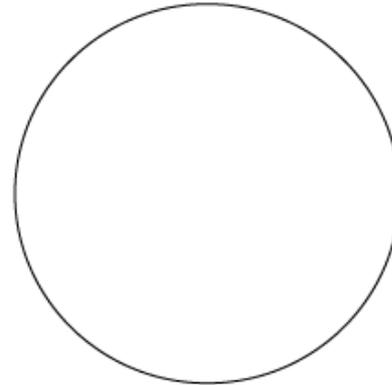

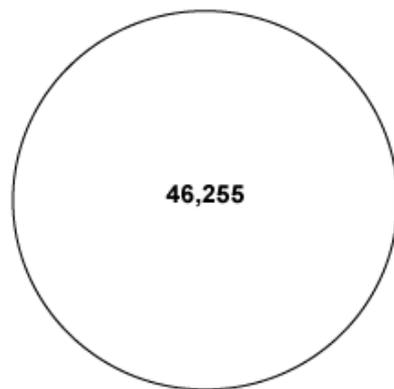

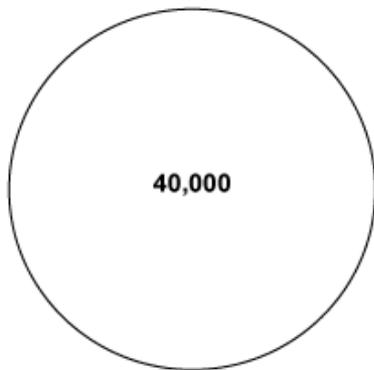

# Circles vs. choropleths

What value does each  
circle represent?

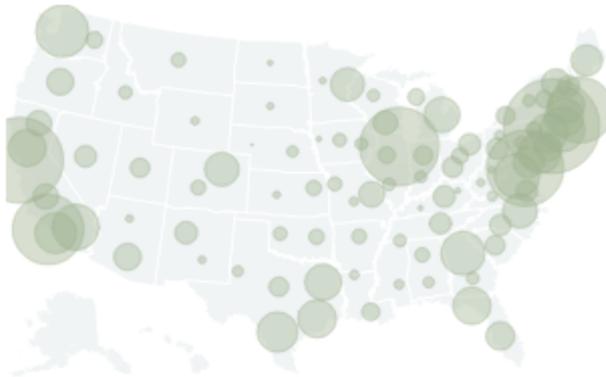

**Barack Obama**  
**\$196,900,097**

Mr. Obama ended March with 10 times the cash on hand as Mr. Romney.

Mr. Obama continued to bring in large totals from coastal and urban areas.

CONTRIBUTIONS GREATER THAN \$200 BY REGION

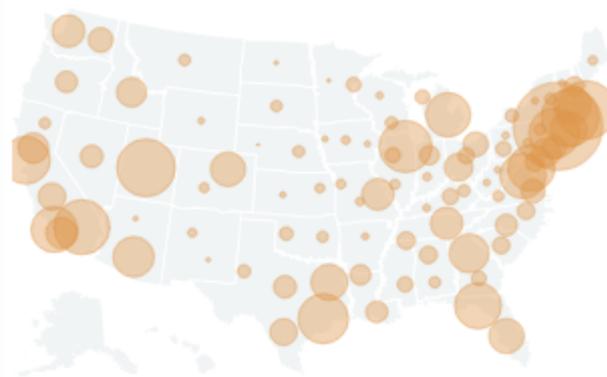

**Mitt Romney**  
**\$87,452,399**

1st of 9 Republican Candidates\* as of March 31, 2012

The presumptive nominee, Mr. Romney ended March with \$10 million in cash.

As in 2008, Mr. Romney did well in urban area and his bases of Massachusetts and Utah.

CONTRIBUTIONS GREATER THAN \$200 BY REGION

# Proportional circles

## **Good for:**

- Accurately showing full range of data
- Geographies of varying sizes
- Raw numbers

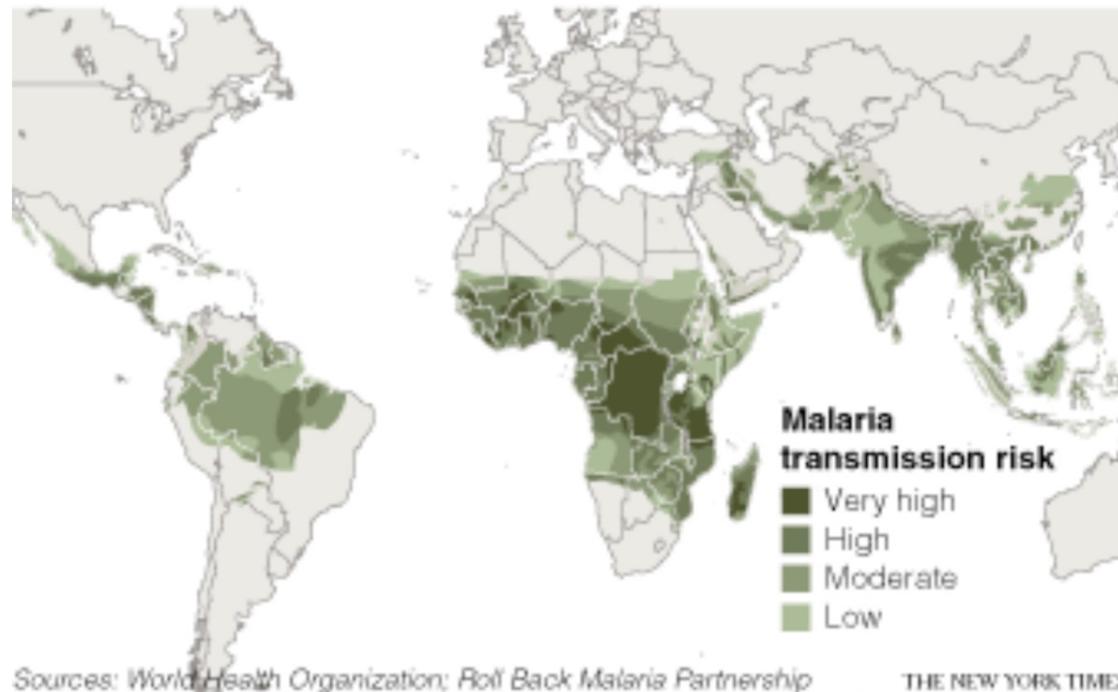

## **Common mistakes:**

- Hard for normals to interpret
- Can be a proxy for population
- Not so exciting without lots of variation

# "Heat" maps

## A Persistent Disease

Malaria has been squeezed globally from both north and south, but remains endemic across much of the tropics.

# "Heat" maps

## triptrop NYC

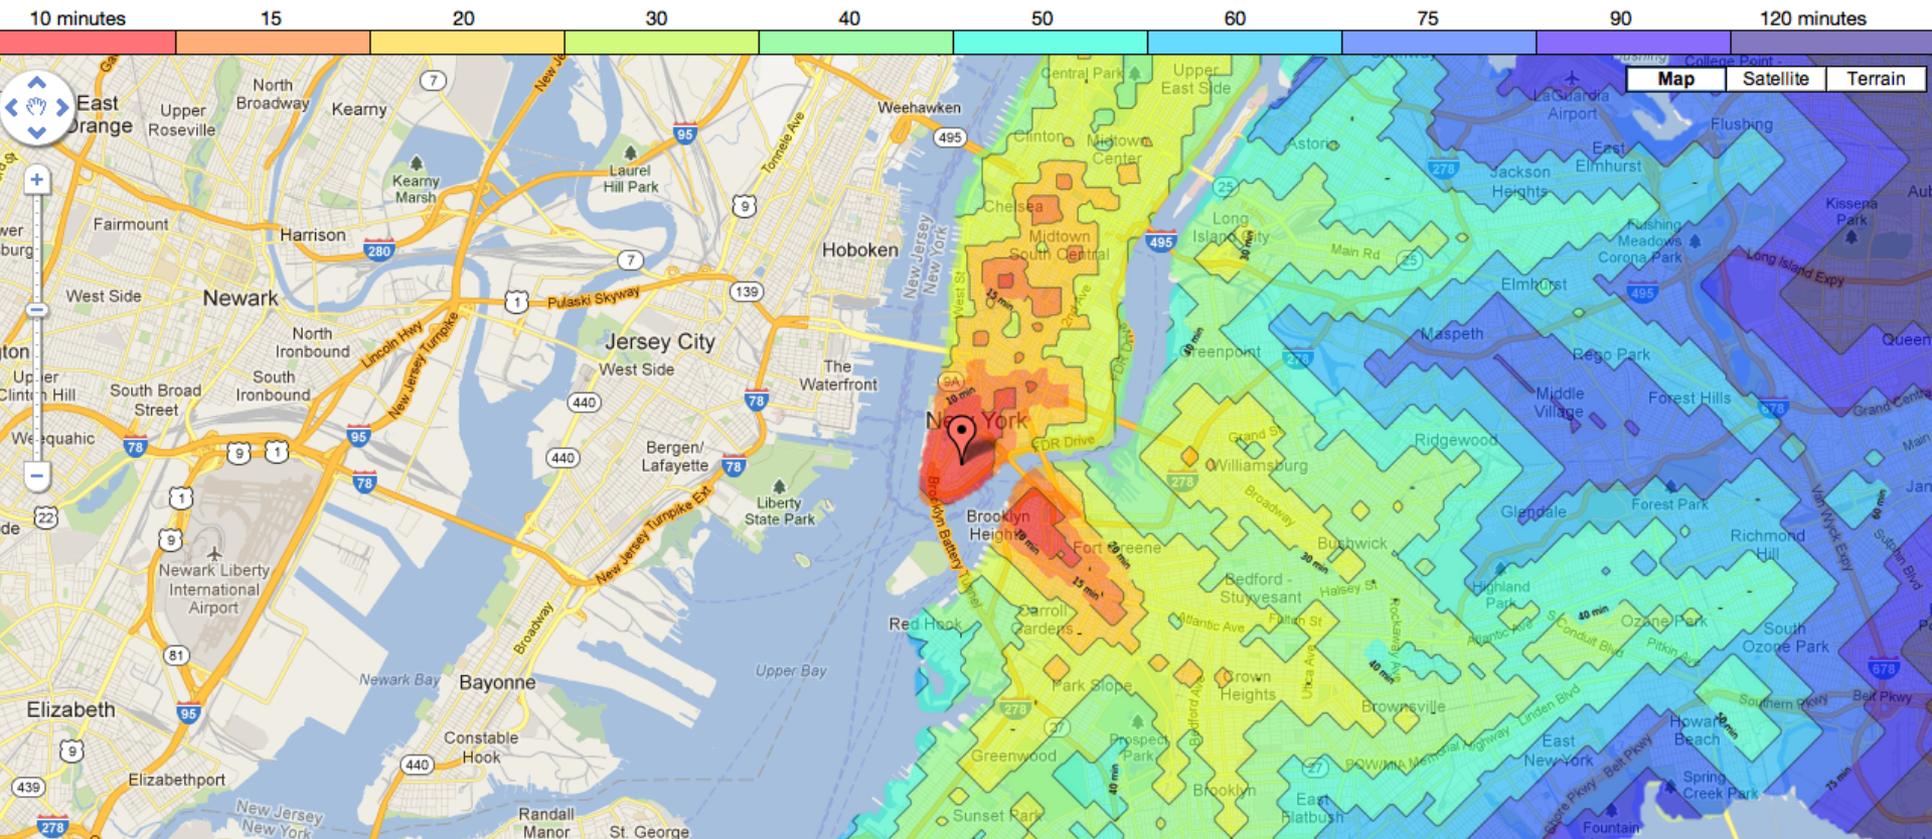

Give us an address and we'll show you how long it takes to get everywhere else in the city.

45 wall st

# The World of Seven Billion

Where and how we live »

# "Heat" maps

## **Good for:**

- Showing concentrations
- Emphasizing the data, when data doesn't match existing boundaries

## **Common mistakes:**

- Make sure colors and breaks are meaningful and thought out

## EARTH ORBIT ON FEB. 6, 2007, 9 A.M. E.S.T.

Each dot represents a man-made object larger than 4 inches

The Relay 2 communication satellite, at right, was launched by the United States on Jan. 21, 1964 and stopped working three years later.

Debris from rocket used to launch Relay 2, left.

Commercial communications satellite launched in June 1999.

Former Soviet Union communication satellite, launched in 1966 and now broken.

The Hubble Space Telescope, launched in 1990, orbits at an altitude of 380 miles.

International Space Station

In service from 1963 to 1977, the U.S.'s Midas 6 satellite was designed to detect launched intercontinental ballistic missiles.

## Orbiting Junk, Once a Nuisance, Is Now a Threat

Rocket debris, pictured at right, from when the Atlantis space shuttle launched a satellite from space in 1991.

Part of Russia's version of the Global Positioning System, this satellite was launched in 1991.

### ● SPACECRAFT

There are more than 3,100 spacecraft orbiting Earth. Two-thirds of these are no longer active.

### ● OLD DEBRIS

Nearly 7,000 pieces of man-made debris are large enough to be tracked.

### ● NEW DEBRIS

The satellite destroyed by China last month has left nearly 1,000 pieces of large debris.

### NEW DEBRIS ON JAN. 11, 2007

The remnants from the Chinese satellite are quickly dispersing in Earth's orbit. More than half the spacecraft in orbit now pass through its debris field.

# Dot maps

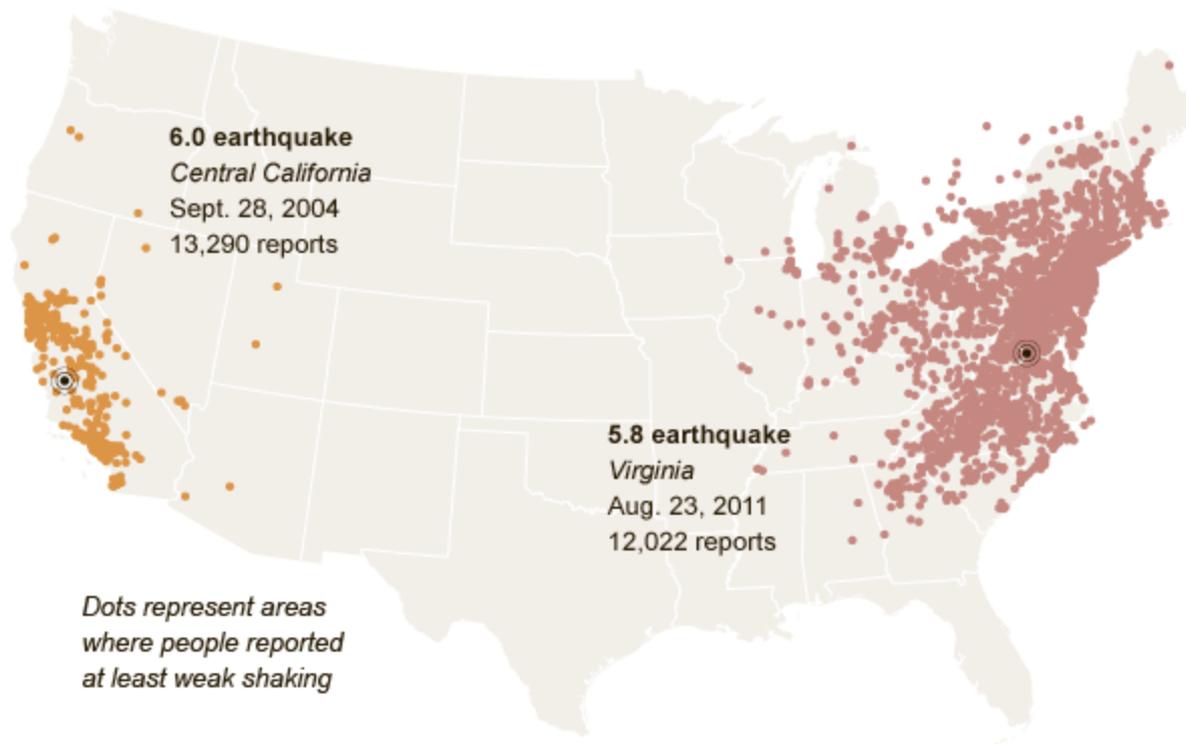

## **Good for:**

- Showing density and distribution
- Geography that can't be easily grouped
- Showing single incidents or events
- If exact coordinates are important to your map

# Dot maps

## Comparing the extent of the shaking

Though less frequent, earthquakes on the East Coast can typically be felt over a much larger area than those with a similar magnitude on the West Coast. The bedrock in California, for example, is fractured, causing seismic waves that travel through it to dissipate faster. In the eastern half of the United States, the bedrock is less fractured and stronger, allowing earthquake energy to travel farther.

# Toxic Waters

*A series about the worsening pollution in American waters and regulators' response*

## Districts Across the Country Shift to the Right

In a sign of discontent with the party in power, 9 of every 10 House districts voted more Republican than they did in 2008.

While Republicans increased their share of the vote in **California 8**, Nancy Pelosi's lead still increased in the absence of a strong third-party candidate.

**Arizona 5** shifted right about 20 points — enough to switch the seat to Republicans. David Schweikert defeated the Democrat he lost to in 2008.

The shift in **Wisconsin 7** was about average for an open race. Here, Sean P. Duffy, a Republican district attorney, won by 8 percentage points.

One of the largest shifts was in **Illinois 17**, where Republican Bobby Schilling, a pizza business owner, beat Phil Hare, a two-term Democratic incumbent.

Only a few districts voted more Democratic. In **Delaware**, the shift helped John Carney defeat Glen Urquhart for the seat held by Michael N. Castle since 1993.

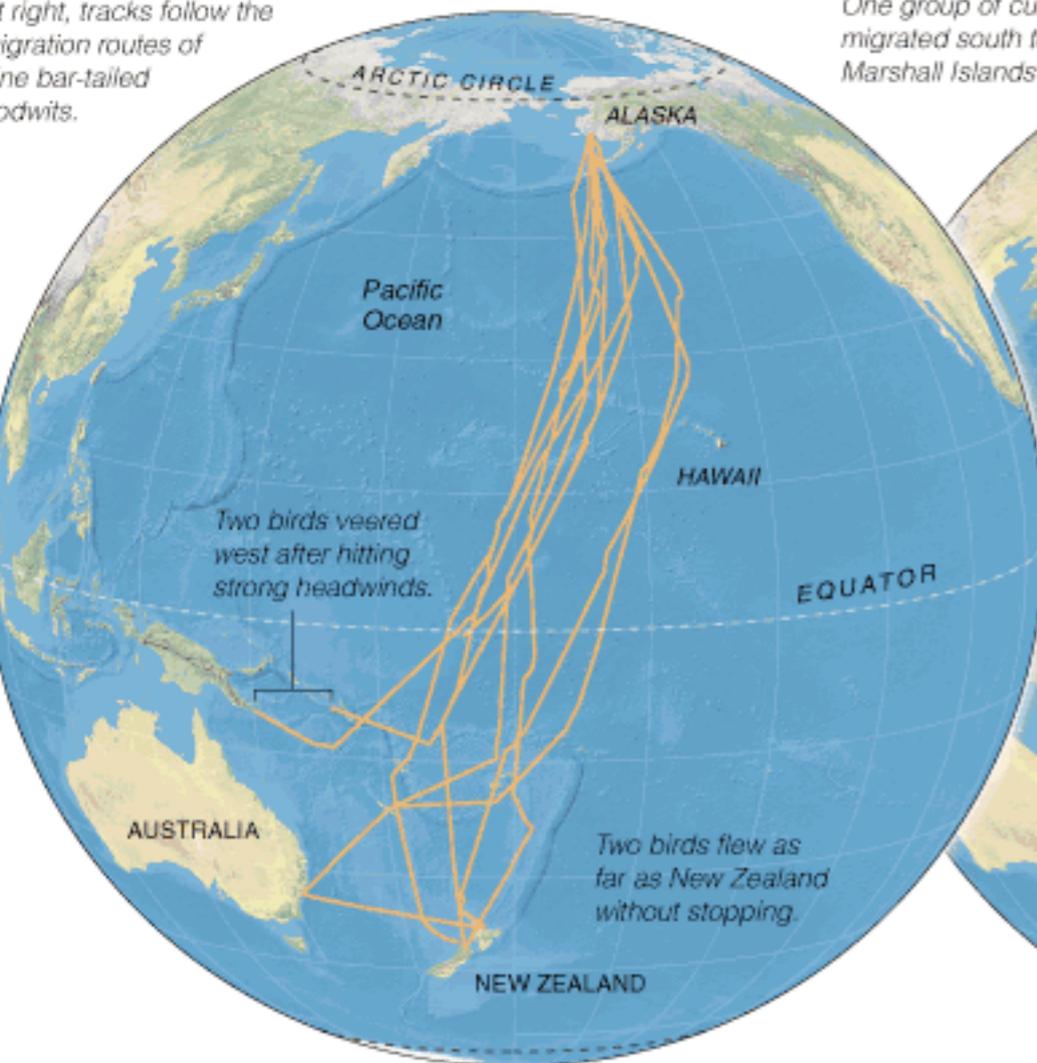

Renee Ellmers delivered one of the Republican Party's narrowest gains in **North Carolina 2**, a district that Democrats won by 36 percentage points in 2008.

**BAR-TAILED GODWIT**

Researchers studying the migration of bar-tailed godwits surgically implanted nine of the birds with battery-powered satellite transmitters, and found that the birds flew nonstop for distances of up to 7,100 miles from Alaska to their winter grounds in the South Pacific.

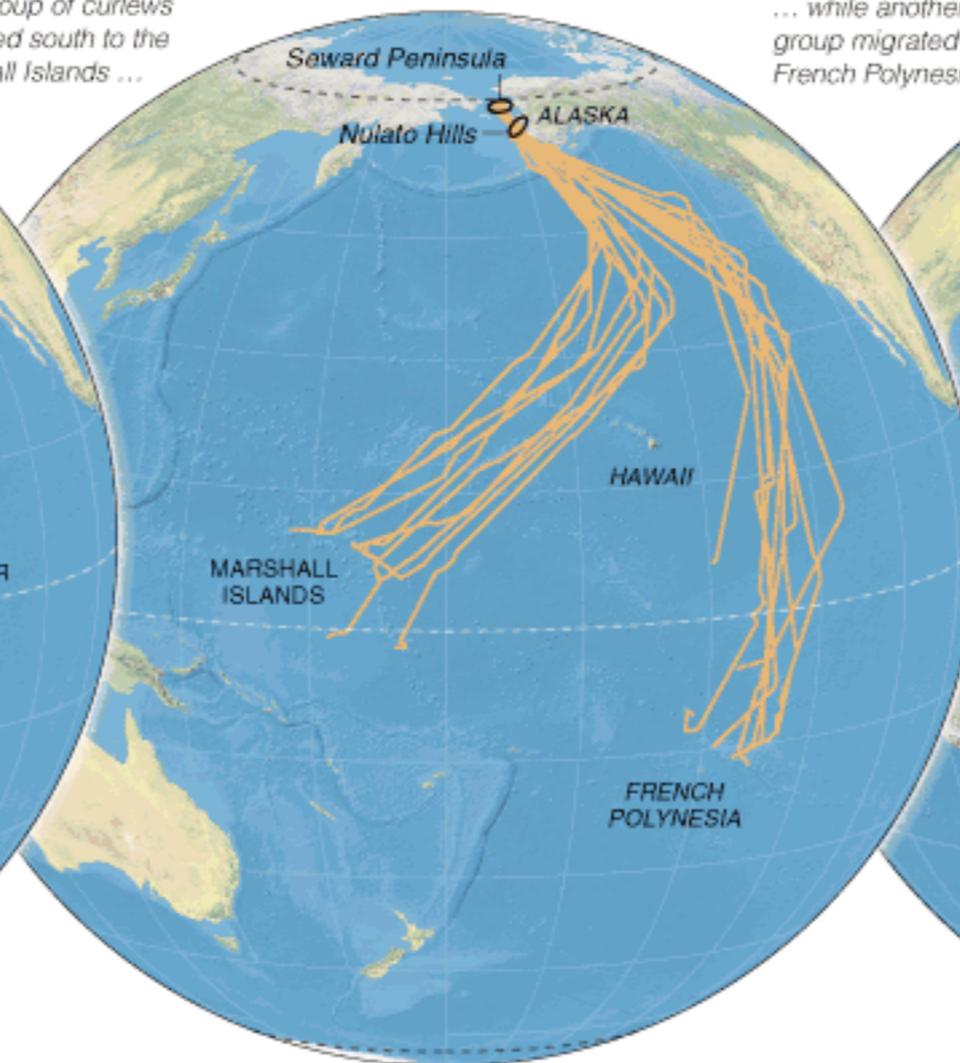

South for the winter  
 Tracks follow the migration routes of the bar-tailed godwits.

**BRISTLED-THIGHED CURLEW**

A protruding antenna is visible in the above photo of a bristled-thighed curlew, one of several birds from two populations in different areas of Alaska that were implanted with transmitters. Researchers found that each group flew nonstop to a different chain of Pacific islands.

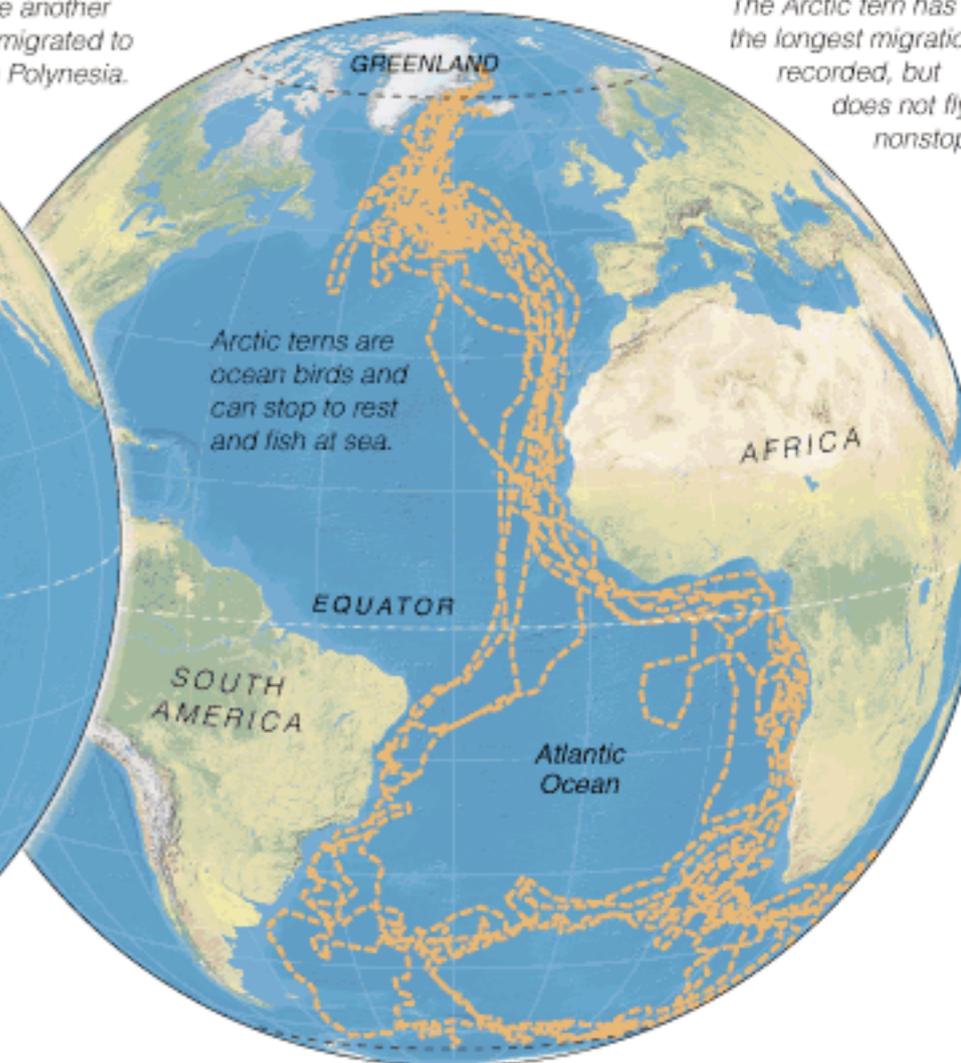

TWO POPULATIONS  
 One group of curlews migrated south to the Marshall Islands ...

**ARCTIC TERN**

Birds that are too small to carry an implant can be tracked with geolocators, tiny devices that record changing light levels. Tagged Arctic terns spent weeks diving for fish in the North Atlantic before flying south along the coast of Africa or South America.

RECORD DISTANCES  
 The Arctic tern has the longest migratory distance recorded, but does not fly nonstop.

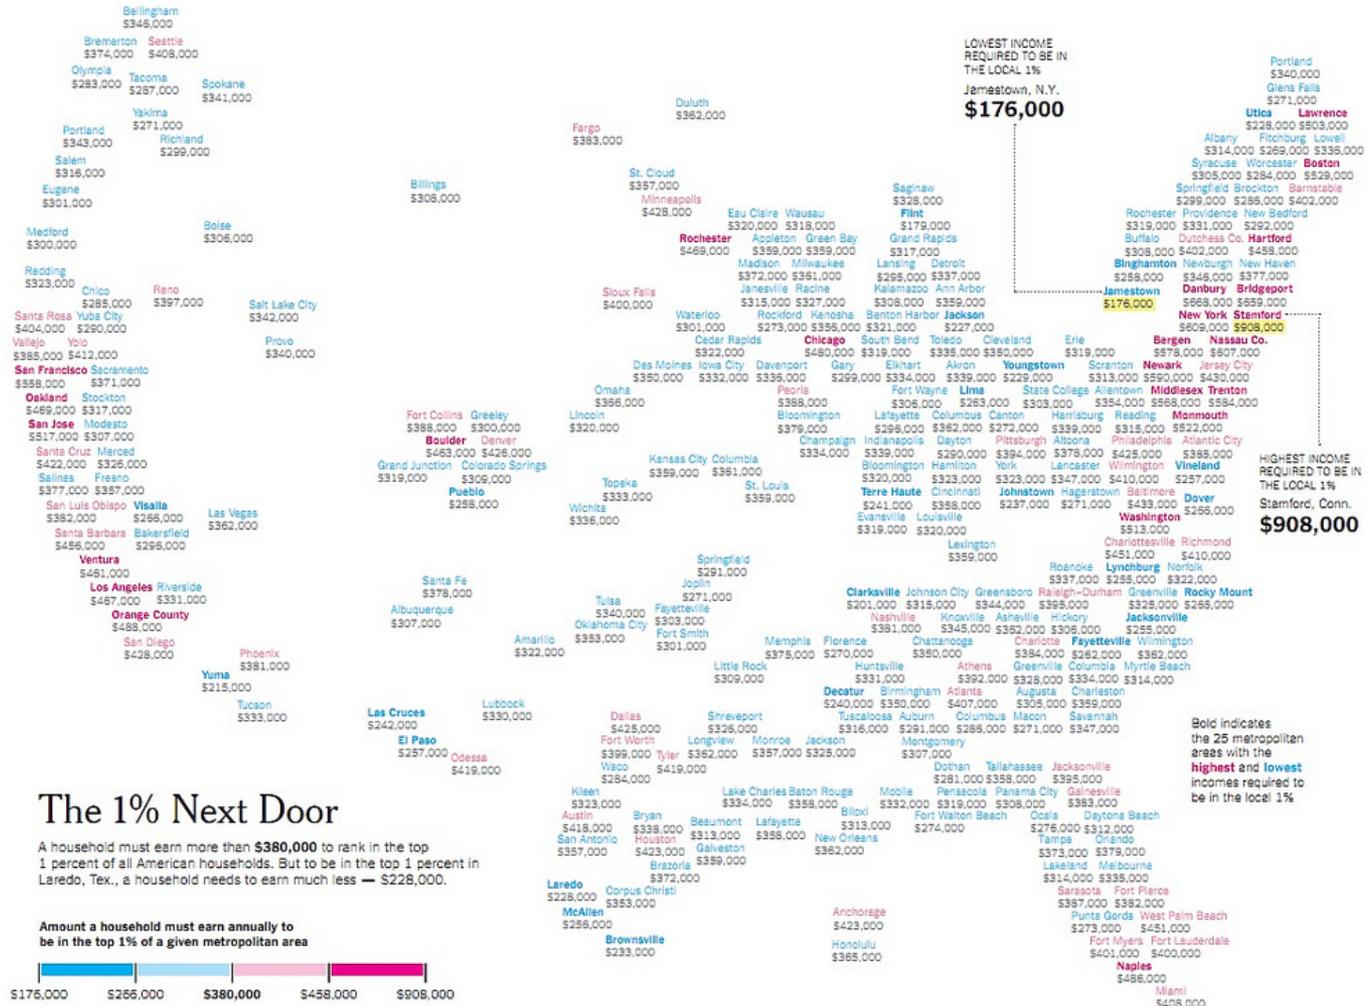

Sources: Robert E. Gill, USGS Alaska Science Center; Carsten Egevang, Greenland Institute of Natural Resources; Arctic Tern Migration Project

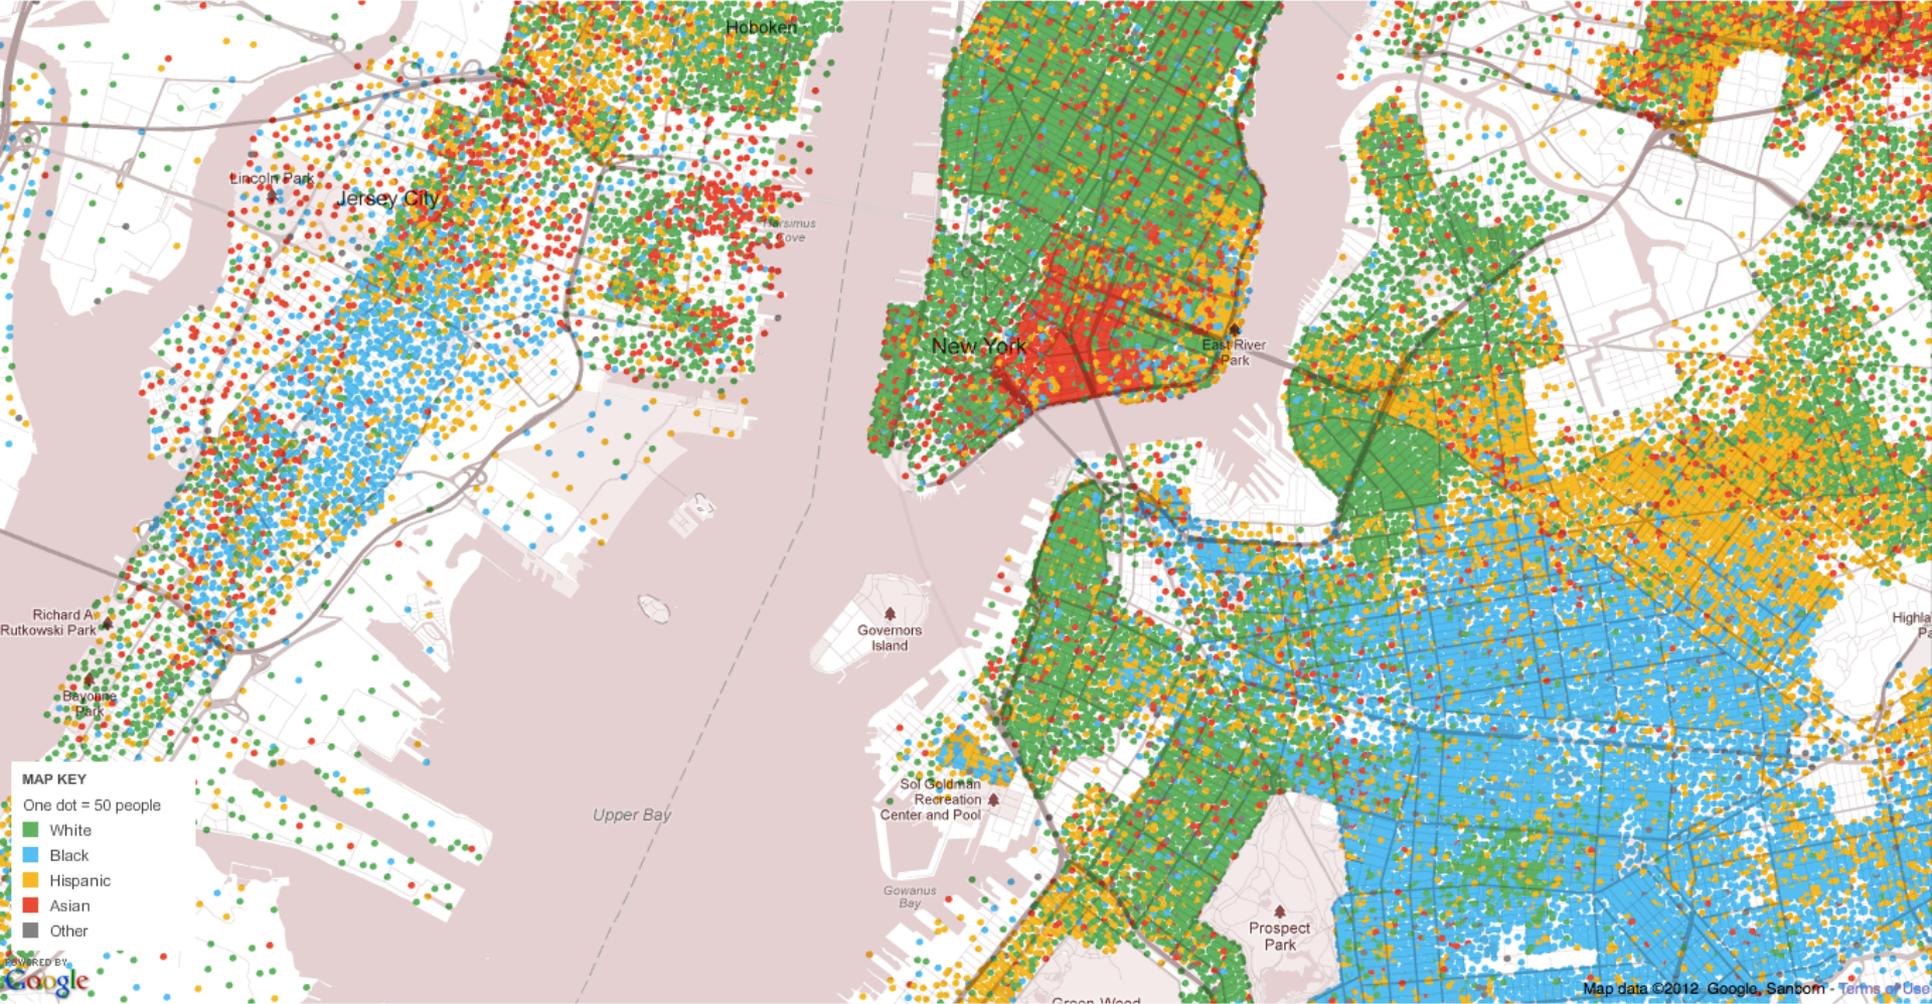

Note: Maps show only southbound migrations.

# MAPPING GENERIC TERMS FOR STREAMS IN THE CONTIGUOUS UNITED STATES

Toponyms, or the names given to places, carry cultural information in their etymology and patterns of use. Generic toponyms, used to describe a general type of feature such as a *lake* or *pond*, tend to change more slowly than specific names. This map shows the distribution of the most popular\* generic toponyms for streams in the United States. These names vary widely across America in their etymological roots, the types of features they refer to, and their cultural patterns of use. These variations reflect the interplay of cultural and physical factors that have influenced naming practices across the country.

\* *River* and *creek* are the most common stream names in the United States, and appear as shades of gray on this map.

## Laser Survey of a Maya City

A small aircraft flying back and forth above the ancient Maya city of Caracol, in Belize, used a laser to penetrate the dense forest canopy.

Viewed in three dimensions, the data revealed new ruins, causeways and agricultural terraces of the sprawling city. A detail of Caracol's city center is shown here.

**THE CAANA PYRAMID** rises 143 feet above Caracol's city center.

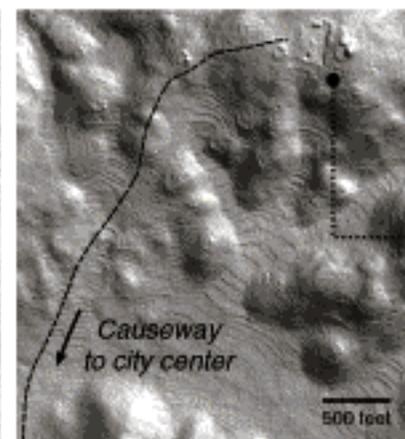

Causeway to Puchituk

### CAUSEWAYS

Numerous constructed stone roads lead from the city center to more distant settlements.

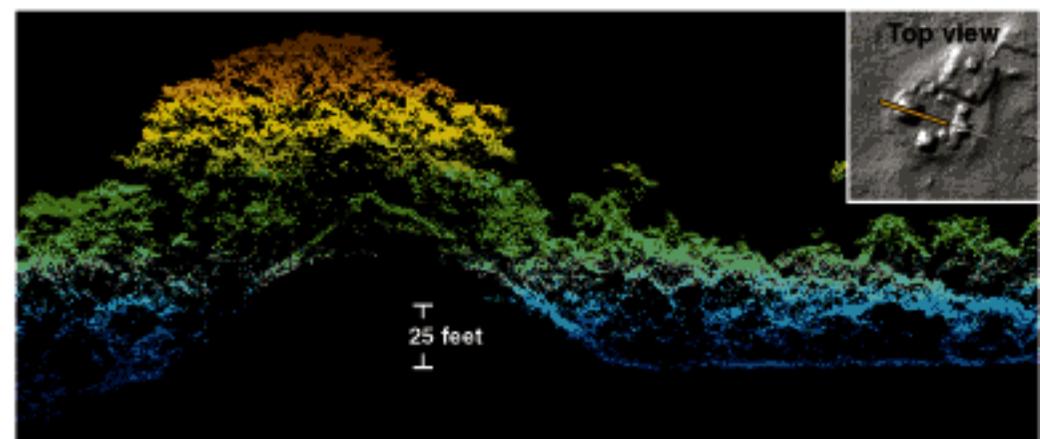

### TERRACES

Agricultural terraces fed a peak population of more than 115,000.

### PUCHITUK

Once surrounded by hundreds of open terraces, the hilltop settlement of Puchituk is now obscured by the forest.

**SATELLITE IMAGERY** from the Ikonos satellite is unable to penetrate heavy foliage.

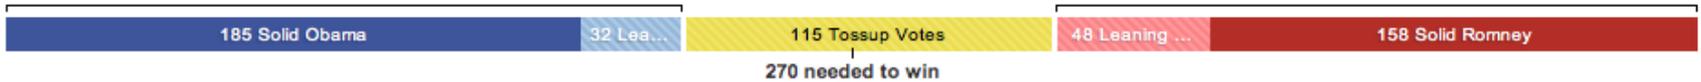

**LIDAR** Using a laser instrument called lidar, for light detection and ranging, to scan the upper canopy shows little detail (left). But some of the laser pulses penetrate the foliage and reflect off the ground, revealing ruins and extensive terracing (right).

**PEERING THROUGH THE FOREST** A lidar scan along a straight track (orange line, inset) shows reflections off the ground and different layers of foliage, revealing the cross-section of a pyramid-shaped structure. In this image the measured points are colored according to height, and are accurate to about six inches.
